Land Information Memorandum

Information in a LIM:

Rates and Water Rates

- Current Rating Valuation.
- Annual Rates.
- Outstanding Rates amounts.
- Water Charges.

Sewer and Stormwater

- Whether the property has district sewer available and whether it is connected.

Natural Hazards

- Actual and potential natural hazards.
- Actual and potential impacts of climate change that exacerbate natural hazards.
- Cumulative or combined effects of these hazards and impacts.

Special Land Features

- Including potential avulsion, falling debris, slippage, alluvion, or inundation on the site which have not identified as natural hazards.
- The status of the land in relation to the contamination of soil by hazardous substances.
- Weathertight Homes information (if relevant).
- Any relevant reports or information held by council in relation to the property.

Archaeological Sites

- Any relevant Archaeological sites.

Building Consents, Licences and Requisitions

- Building Permits/Consents issued on the property.
- Any outstanding works, Code Compliance Certificates for consents issued since 1993.
- If a Compliance Schedule has been issued for the building and when the related Warrant of Fitness expires.

Licences and Environmental Health

- Whether the property has a licence relating to the sale of food, the sale of liquor or any other licence (under Health Act 1956).

Enforcements and Notices

- Any notice, order, or requisition affecting the land or any building on the land previously issued by Council.

Planning and Resource Management

- Zoning of the property as defined by Operative and/or Proposed District Plans.
- All Resource Consents approved in relation to the property.
- Long term Community Plans.
- Structure Plans.

Drainage and Water

- Information on public stormwater and wastewater pipelines on the property as shown on Councils log plans.
- Water toby location.

Maps

- Maps relating to the property including Aerial Photo, Land Information, District Plan, Natural Hazards (not District Plan) and Archaeological Sites and Deposited Plan.

Information not in a LIM:

- Building Plans.
- For information in relation to State Highways please contact the New Zealand Transport Authority (NZTA).
- Western Bay of Plenty District Council does not hold any information concerning electricity, gas and telephone connections.
- Records of Title (previously known as Certificates of Title).

Disclaimer:

- Under section 44D of the Local Government Official Information and Meetings Act 1987 The territorial authority is not liable in a civil or criminal proceeding for making available in good faith the information in a land information memorandum that is known to the territorial authority about natural hazards that is required by s 44B. This includes information that identifies the following:
    - each natural hazard and each impact of climate change that exacerbates natural hazards, that affects the land concerned;
    - each potential natural hazard and each potential impact of climate change that exacerbates natural hazards to the extent that the territorial authority is satisfied that there is a reasonable possibility that the hazard or its impact may affect the land concerned (whether now or in the future);
    - the cumulative or combined effects of the hazards and impacts referred to above; and
    - any further information required by the regulations to make the information above more understandable.
- The Council records can be incomplete in some instances.
- The Council has not carried out an inspection of the land and/or buildings for the purpose of preparing this LIM. The Council records also may not show illegal or unauthorised building or works on the land.
- The Council does not provide interpretation or advice on how to interpret or utilise this information. If this required, the applicant should seek appropriate and independent professional advice.

Land Information Memorandum

Sections 44A and 44B Local Government Official Information and Meetings Act 1987

25 November 2025

P/1225/15

ADAMS, GARTH DEAN
19 KAHAWAI PLACE
OMOKOROA 3114

Kia orā

Thank you for your application for a Land Information Memorandum.

The original of this LIM has been prepared pursuant to Sections 44A and 44B of the Local Government Official Information and Meetings Act 1987, solely for the applicant, and contains information known to Council within its records and only relevant to the site requested. The reliance by other parties on the information within this LIM shall be at that other parties' sole risk. If any interpretation or explanation is required on any of the enclosed information or plans, the services of an independent advisor or consultant should be sought.

It is recommended that the Record of Title, which is not issued by Council, be searched by the purchaser. The LIM does not necessarily include information relating to private covenants or other memoranda affecting the title and those should be obtained from a Land Record search.

In preparing this report, no Council inspection of the property has been undertaken.

This Land Information Memorandum is valid as at the date of issue only.

Ngā mihi

The Consents Services Team (Resource Consents)

limprocessors@westernbay.govt.nz

1 Applicant

Client Name:	
Applicant Name:	ADAMS, GARTH DEAN
	19 KAHAWAI PLACE
	OMOKOROA 3114
Postal Address:	19 KAHAWAI PLACE
	OMOKOROA 3114
Application Date:	13 Nov 2025
Issue Date:	25 November 2025

2 Property

Property Owner:	ADAMS, GARTH DEAN
	ADAMS, SHARON PAULINE
Valuation No:	06829 005 64
Location:	25 KAHAWAI PLACE CENTRAL
Legal Description:	LOT 59 DP 537960
Area (hectares):	0.0575

Copies of any relevant deposited plan(s) can be found in the 'Maps' Section of this LIM (if available). Please note, this is not a Record of Title(s)

3 Rates and Water Rates

The information provided on rates/financial details in this report may not reflect the current details of the legal description/valuation on your application form. This may be due to the property being under subdivision or that the information has not yet been provided or updated for the current valuation and improvements for this financial year.

Note: Rates, Rateable Valuation Details and Water Rates relate to a valuation number. This may be linked to other properties, or a parent property. For this Land Information Memorandum, the valuation number 06829 005 64 is linked to:
Lot 59 Deposited Plan 537960

Land Value:	$455,000
Improvements:	$545,000
Capital Value:	$1,000,000
Tree Value:	$0
Annual Rates:	$4,602.13
Rates Owing:	$0.00

Note: For the period until rates are "set" the Current Annual Rates and Rateable Valuation Details should not be relied upon and any queries should be directed to the Rates Team.

Rates are charged in two equal instalments for the period commencing 1 July and ending 30 June each year.

Water Rates – This information applies to Western Bay of Plenty District Council (WBOPDC) systems only. In some parts of Tauriko, Papamoa, Pyes Pa and Oropi, properties are served by Tauranga City Council system.

Metered Water	YES
Date of Last Reading	19 Aug 2025
Connected	YES
Available	YES
Owing	$0.00

Water rates may be outstanding on this property as meter readings are completed six monthly.

Further information about Council's water supply and water quality is available from Council's website. Please refer to the WBOPDC Water Supply System Bylaw 2008: Water Supply System Bylaw 2008

Rates information and valuation history can be found online at the WBOPDC website: Rating Information Search

For any information regarding Māori Land, please contact the Waiariki or Waikato/Maniapoto Office of the Māori Land Court or view their website and online records at: Māori Land Court

---

4 Building

This information is a record of details held on Council files and may not reflect the situation on site if work has been undertaken without consent. If Council holds any as-built drainage plans relevant to this property they will be included in the attachments section of this LIM.

4.1 Building Consents

BC	Project	Status of Consent
92128	NEW RETAINING WALL	CCC FINAL ISSUED 26 Jan 2021
94017	NEW DWELLING	CCC FINAL ISSUED 04 Nov 2020

Building, Plumbing and Drainage Permits issued prior to 1993 will not have a Code Compliance Certificate as the requirement for this did not come into effect until 1 January 1993.

Note: Any information held by Council relating to Building Permits will be listed on the Historical Data page at the back of this section in your LIM.

Information regarding buildings where Council holds no records of consents:

The absence of records for building permits or consents may mean any of the following:

- The building was erected without a permit or consent.
- The building work may be exempt from requiring a permit/consent.
- A Council record is unable to be located.

If building work was carried out without a building permit prior to the 1991 Building Act, or without obtaining building consent under the Building Act 1991 or Building Act 2004, then there is no authority under those Acts for the Council to retrospectively issue a building consent for the work.

For buildings erected prior to the commencement of the Building Act 1991, without any building permit or for which Council holds no records, then Council is generally unlikely to take any action against the current owners of that building unless the building is unsafe or insanitary in terms of the Building Act 2004 or the Health Act 1956. This assumes that the building complies in all other respects with other statutory requirements.

For post-Building Act 1991/Building Act 2004 work, for which the Council holds no record, or the work is not exempt, it is likely that the building work was carried out without consent. If so, the property owner and the person who carried out the work may have contravened the Building Act 1991 and Building Act 2004, and enforcement action may be taken at the Council's discretion. However, some building work is exempt from requiring a permit/consent. This generally applies to small buildings or structures and minor alterations. Irrespective of whether consent is required the Building Act requires that all building work must comply with the Building Code. Potential purchasers of properties requiring further information on building work are advised to engage a qualified building professional to inspect and report.

A certificate of acceptance can be applied for when work is done without a building consent after 1 July 1992, or in specific circumstances when a code compliance certificate (CCC) can't be issued.

For further information go to – Certificate of Acceptance Information

4.2 Certificate of Acceptance

COA	Status

6 Natural Hazards

This section contains details of whether the land is affected by one or more natural hazards as defined in the Resource Management Act 1991:

"Natural hazard means any atmospheric or earth or water related occurrence (including earthquake, tsunami, erosion, volcanic and geothermal activity, landslip, subsidence, sedimentation, wind, drought, fire, or flooding) the action of which adversely affects or may adversely affect human life, property, or other aspects of the environment".

This information should not be regarded as a full analysis of the site features of this land as there may be features that the Council is unaware and has no knowledge of. It is the landowner's responsibility to determine whether the property is suitable for any proposed activity or whether any proposed building site is suitable for development (and to undertake tests if necessary).

Notes: The WBOPDC's website linked below contains information about natural hazards which may be relevant to the site. Before using this website it is important that you read the terms of use to understand the limitations of that information. You are advised to seek expert advice regarding applicability and accuracy of the information as it relates to the site. The website does not replace a Land information Memorandum (LIM), which is requested from the District Council, and may contain other information about natural hazards.

The website can be accessed at the following link: Natural Hazards - Western Bay of Plenty District Council.

The Bay of Plenty Regional Council's **Bayhazards** website linked below also contains information about natural hazards which may be relevant to the site. Before using the Bayhazards website it is important that you read the terms of use to understand the limitations of that information. You are advised to seek expert advice regarding applicability and accuracy of the information as it relates to the site. The Bayhazards website does not replace a LIM which is requested from the District Council, and may contain other information about natural hazards. The **Bayhazards** website can be accessed at the following link: Bayhazards Natural Hazards Viewer.

6.1 Natural Hazard Information sourced from Western Bay of Plenty Operative (District Plan)

The District Plan maps currently identify coastal erosion, coastal inundation, flooding and land instability in some of the locations that may be susceptible to them. See the 'District Plan' map in the 'Maps' Section of this LIM.

Property specific Natural Hazard information relating to the Natural Hazards identified by the District Plan map can be found under Section **'6.3 Natural hazard information relating to the land concerned'.**

6.2 Natural Hazard Information Relating to the Building Act 2004

This section contains details of:

- Whether a notification of a building consent that relates to a natural hazard on the land concerned has been provided for under section 73 of the Building Act 2004, or in accordance with section 36(2) of the Building Act 2004 or section 641A of the Local Government Act 1974.
- Signs or notices under section 133BT of the Building Act 2004 on or near building on the land.
- Entries on certificates of title under section 434 of the Building Act 2004

No information known to Council.

Note: If there is an Earthquake Prone Building located on this property it will be identified in Section "Earthquake Prone Buildings" of this LIM report.

6.3 Natural Hazard Information Relating to the Land Concerned

6.3.1 Earthquake

Note: If there is an Earthquake prone building located on this property it will be identified in Section "Earthquake Prone Buildings" of this LIM report.

6.3.2 Active Faults

No information known to Council.

6.3.3 Liquefaction

NOT DISTRICT PLAN
Regionwide

Tonkin + Taylor Ltd have prepared a report titled 'Bay of Plenty Regional Liquefaction Vulnerability Assessment' (April 2021). The report was commissioned by the Bay of Plenty Regional Council.

The report presents the results of a liquefaction mapping exercise for the Bay of Plenty Region.

The Report was prepared in accordance with the Ministry for the Environment (MfE) and Ministry of Business, Innovation and Employment (MBIE) 'Planning and Engineering Guidance for Potentially Liquefaction Prone Land' (2017) to a Level A (basic desktop assessment) level of detail.

The liquefaction maps from the report are shown on the map in this LIM titled 'Natural Hazards (Not District Plan)' and on Council's online natural hazards maps. The mapped categories are 'liquefaction damage is unlikely', 'liquefaction damage is possible' and 'liquefaction category is undetermined'.

The subject property is identified based on information contained in the report as having one or more of these categories.

'Liquefaction damage is unlikely' means a probability of more than 85 percent that liquefaction-induced ground damage will be none to minor in a 1-in-500 year earthquake shaking event.

'Liquefaction damage is possible' means a probability of more than 15 percent that liquefaction-induced ground damage will be minor to moderate (or more) in a 1-in-500 year earthquake shaking event.

'Liquefaction category is undetermined' means that a liquefaction vulnerability category is undetermined, either because a liquefaction assessment has not been undertaken for this area, or there is not enough information to determine the appropriate category with the required level of confidence.

The report can be viewed on Council's natural hazards webpage (liquefaction subpage) at www.westernbay.govt.nz/liquefaction.

6.3.4 Tsunami

No information known to Council.

6.3.5 Coastal Erosion

No information known to Council.

6.3.6 Volcanic and Geothermal activity

No information known to Council.

6.3.7 Landslip

No information known to Council.

6.3.8 Subsidence

No information known to Council.

6.3.9 Sedimentation

No information known to Council.

6.3.10 Wind

No information known to Council.

6.3.11 Drought

No information known to Council.

6.3.12 Fire

No information known to Council.

6.3.13 Flooding

No information known to Council.

6.3.14 Coastal Inundation

No information known to Council.

6.3.15 Other General Natural Hazards Information

FLOODING

Flood hazard information referenced here includes modelling produced at a nation-wide scale by Earth Sciences New Zealand (ESNZ). The national tool provides consistent flood hazard data across New Zealand and is zoomable to street level, but not to individual properties. For property-specific flood hazard information that may affect this property please refer to the following section of this Land Information Memorandum titled, "Natural Hazards Relevant to the Subject Property". The modelling produced by ESNZ is available to view at the following link: Flood Hazard Modelling.

LANDSLIDE

Council holds information from a recent regional landslide study (2023) that identifies areas susceptible to landslide (from rainfall and earthquake) across the whole of the district. These results are high-level and not able to be shown at a property level. For more information go to the Land Instability pages on the Western Bay of Plenty District Council's website.

---

7 Special Feature(s) or Characteristic(s)

This section contains information about other special features or characteristics of the land that is known to the Council, but is not apparent from a district plan under the Resource Management Act 1991, including:

- potential avulsion, falling debris, slippage, alluvion, or inundation on the site which have not already identified as natural hazards above.
- the likely presence of hazardous substances on the site.

This information should not be regarded as a full analysis of the site as there may be features that the Council has no knowledge of. The applicant is solely responsible for ensuring that the land is suitable for a particular purpose.

7.1 Hazardous Substance(s)

No information known to Council.

7.2 Site Contamination

No information known to Council.

7.3 Hazardous Contaminant(s)

No information known to Council.

---

8 Historic Heritage Features and Archaeological Sites

Please refer to the map section of this LIM. The Geographic Information Services (GIS) plan entitled 'Archaeological Sites' will identify any registered archaeological site(s) over the property (depicted as a "U" number in a red/pink box/circle). If a site(s) is recorded on the property, an 'archaeological sites report' will be attached.

Please also refer to the District Plan map, this will also identify any significant historic heritage features located on the property. If a significant historic heritage feature is recorded over the property, the provisions of Section 7 (Historic Heritage) of the Operative District Plan apply.

If the GIS plan or District Plan map does not identify any archaeological site(s) and/or historic heritage feature(s) it should not be assumed there are no sites or features, only that Council has no record of these. Property owners still have obligations under the Heritage New Zealand Pouhere Taonga Act 2014 in that it is an offence for anyone to destroy, damage or modify or cause to be destroyed, damaged or modified, the whole or part of any archaeological site, knowing or having reasonable cause to suspect it is an archaeological site.

Further information on Archaeological Sites and/or Historic Heritage Features in the Western Bay of Plenty District can be found here;

- Operative District Plan
- NZAA Arch Site Hub
- Heritage New Zealand

---

9 Sewer and Stormwater

There are Council Services on this property (refer to the 'Land Information' map in the Maps section of this LIM).

District Sewer Connected: YES

District Sewer Available: YES

If a sewer is available, under the Local Government Act 1974, the property must connect to the sewer if it is within 30 metres of the property boundary or if the sewer is within 60 metres of the dwelling.

9.1 Septic Tanks and On-Site Effluent Treatment Systems (OSET)

Most septic tanks in the Western Bay of Plenty are permitted provided they are adequately maintained, however, when making dwelling additions you may need to upgrade the wastewater system, and this will require Building Consent under the Building Act 1991.

The removal and/or upgrade of existing septic tanks and/or OSET may also require Resource Consent from the Bay of Plenty Regional Council. Please contact Bay of Plenty Regional Council directly 0800 884 880 if you have any further questions about this.

---

10 Network Utility Operators

The WBOPDC does not hold any information concerning electricity, telecommunication and gas connections. Information may be obtained from the relevant network utility providers.

---

11 Projects

We work to provide good-quality local infrastructure and local services to our communities. Council projects tend to be one off, take place over the long term and impact a large area or community. You can read about Council projects here:

Council Projects

---

12 Planning/Resource Management

12.1 The Western Bay of Plenty Operative District Plan

This property is zoned **Medium Density Residential (Omokoroa)**. See the District Plan map in the 'Maps' section of this LIM. The District Plan including rules, maps and performance standards, plus any current (and previous) Plan Changes can be found here:

Operative District Plan

12.3.5 Designation(s)

None known

12.3.6 Proposed Esplanade Strip(s) and /or Reserve(s)

None known

12.3.7 Esplanade Strip(s) and /or Reserve(s)

None known

12.3.8 Other

None known.

12.4 Resource Consents

RC Number	Status	Consent Type	Date Granted
	None Known		-

Notes:

- Resource consents can lapse. Applicants are advised to verify the status of Resource Consents with Council staff.
- If a Resource Consent(s) has been granted on this property it does not infer that the conditions of the consent have been met. Applicants are advised to verify the status of Resource Consent(s) with Council's Customer Service Planner.

12.5 Other Consents, Certificates, and Licences

Any information held by council relating to Historic Planning Consents will be listed on the 'Historical Data' page attached to this LIM.

If there are any Consent Notices (and associated technical reports), Certificates, Bush Protection Inspections and/or Yard Exemption Statements relevant to this property they will be included in the 'Attachments' section of this LIM.

12.6 Community Plans

Council has a programme to help urban communities in the district develop long term plans that detail a vision for each community. Information regarding current Community Plans can be found here:

Community Plans

12.7 Structure Plans

Structure plans have been created by Council to assist in managing the District's growth. These identify new areas for development and show required infrastructure (roading, water supply, wastewater disposal, stormwater and recreation) and associated costs. These structure plans are contained in and shown on the Planning Maps.

Structure Plans

13 Other Useful information

The WBOPDC provides the following discretionary information which it considers to be relevant in accordance with Section 44A(3) of the Local Government Official Information and Meetings Act 1987 (LGOIMA).

13.1 Council Website and ePlan

The Council's Website provides comprehensive information and resources, including details on building and resource consents topics such as natural hazards and zoning.

Council Website

The ePlan is an interactive electronic version of the District Plan. It aims to make it easier to find information relevant to your property and to have your say on changes to the District Plan.

ePlan

13.2 Reserve Management Plans

There are management plans in place for 222 reserves across the District, including plans covering each urban community.

Management plans are a statutory requirement under the Reserves Act. A plan provides a one-stop reference point that includes a reserves classification and legal status, the area it covers, infrastructure and funding for capital projects councils want to undertake.

Reserve Management Plans

Under Council's Reserve Management Plan(s) any property adjoining a public reserve is not permitted to encroach onto that reserve. Where new encroachments occur, or if an existing encroachment exists, Council will give notice to the encroacher to remove the encroachment and reinstate the reserve at their own cost. Please refer to the Reserve Management Plan.

13.3 The Bay of Plenty Regional Council

Regional Council policies and plans may affect the use and management of land, water air and other natural and physical resources.

For further information on whether a property is affected by any Regional Planning instrument or by some other function of the Regional Council please contact Regional Council.

Bay of Plenty Regional Council Website

13.4 The Ministry for the Environment

The Ministry for the Environment administer Acts, National Policy Statements, National Environmental Standards and other regulations.

Act and Regulations

HISTORICAL DATA

There are no historical building permit documents held for this property

There are no historical planning consent documents held for this property

Archaeological Sites Report as at 13 Nov 2025

INTERPRETATION OF DATA FROM NEW ZEALAND ARCHAEOLOGICAL ASSOCIATION SITE RECORDING SCHEME

An archaeological site or sites exist within the identified area shown on the attached GIS A3 colour plan of the property.

It should be noted that the supplied ArchSite data contains information on site position collected since the mid-1950s, prior to the advent of Geographic Information Systems (GIS) and Global Positioning Systems (GPS) technology. The methods used range from manually plotted coordinates on topographical maps through to the GPS technology of today.

The archaeological sites can be displayed in one of 3 ways:

1. A large pink square representing a100m grid means that the site(s) is one of the original sites recorded in the CINZAS database
2. A smaller purple 50m square means the site has been captured on screen (GIS)
3. A red 50m circle means the site has been surveyed by GPS

Regardless of capture method, the areas show there is at least one recorded site in that vicinity but it does not necessarily mean that the site occupies all of the parcels of land that lie within the areas. All areas are a flag and the exact location and extent of the site should be determined before anything else.

For many purposes, an inspection by a qualified archaeologist will be required. Information from the Site Recording Scheme is not a substitute for this.

Information from the Site Recording Scheme is available to members of the public. A fee may be charged for searching the files, extracting relevant information, and photocopying.

The following features of the data should be noted:

- ☐ A grid reference gives the location of a site, but it does not delimit its extent. The location of sites is usually only recorded to within about the nearest 100 m but the accuracy may in some cases be less than this.
- ☐ The absence of data for any particular area should not be taken to mean that it contains no archaeological sites. It may mean that no survey has been carried out, or that sites were obscured at the time the survey was done.
- ☐ Some recorded sites may no longer exist. (They may, for example, have been destroyed since they were recorded.)
- ☐ Historical (European period) archaeological sites, in particular, are currently under-represented in the Site Recording Scheme.
- ☐ Not all sites recorded in the Site Recording Scheme are archaeological sites in terms of the Heritage New Zealand Pouhere Taonga Act 2014. They may, for example, post-date 1900 or no longer be able, through investigation by archaeological methods, to provide evidence relating to the history of New Zealand.
- ☐ The formal evaluation of site significance is not a function of the Site Recording Scheme.
- ☐ While some archaeological sites may also be considered wahi tapu, the Site Recording Scheme is not specifically concerned with such places. If information about wahi tapu is required, it should be obtained from the relevant iwi.
- ☐ Information about burial sites will, in some circumstances, be withheld.

There are legal responsibilities that relate to all archaeological sites located at the grid references listed below, whether they are listed or recorded. This section lists all the archaeological sites which have been recorded as part of the New Zealand Archaeological Association site-recording scheme.

Note that some of these sites are also listed.

Section 42 of the Heritage New Zealand Pouhere Taonga Act 2014 makes it an offence for anyone to destroy, damage or modify or cause to be destroyed, damaged or modified, the whole or any part of any archaeological site, knowing or having reasonable cause to suspect it is an archaeological site.

Section 44 of the Act allows an application to destroy, damage or modify an archaeological site. In processing the application, the Trust may consider that the site should be listed and it will act accordingly.

For a copy of the Site Record Form please contact the Archsite Administrator for the New Zealand Archaeological Association (admin@archsite.org.nz).

For further information about what development can be carried out on the site please contact:

APPENDIX C: PRE-DEVELOPMENT FIELD INVESTIGATION DATA

APPENDIX D: EARTHFILL QUALITY CONTROL DATA

APPENDIX E: POST CONSTRUCTION HAND AUGER BOREHOLE LOGS

1. INTRODUCTION

This Geotechnical Completion Report (GCR) has been prepared for Neil Construction Limited, as part of the documentation to be submitted to Western Bay of Plenty District Council (WBoPDC) following residential subdivision development in general accordance with Resource Consent Number RM15-0050-AP.

This report covers the earthworks construction period from March 2017 to April 2019 and is intended to be used for certification purposes for new Lots 36 to 61 inclusive, located within Stage 2 of the Te Awanui Waters subdivision at 423 Omokoroa Road, Omokoroa as shown on the appended Shrimpton and Lipinski Consultants Limited (S&L) Subdivision Scheme Drawing (***Drawing 21118-RC1 Revision 5***).

CMW was engaged as the geotechnical consultant to this project from October 2018 and therefore some initial works within the Stage 2 subdivision have relied on information and inspections from S&L Consultants during the initial construction of the Stage 1 subdivision, which started in March 2017.

This report is intended to be used for geotechnical certification purposes for residential lots 36 to 61, together with the recently constructed portions of Kahawai Place and Parore Drive (Lot 212) and the jointly owned access Lot 196.

It forms the basis of our Geotechnical Suitability Statement (WBoPDC Cert 10c) provided in ***Appendix A***. The report provides a review of existing geotechnical investigation data, the results of construction observations and quality control test data provided by WSP Opus and S&L.

2. SUBDIVISION SCOPE

This report provides certification for 26 residential lots (numbered 36 to 61) that make up Stage 2 of the Te Awanui Waters subdivision, which is situated over a gently graded earthworked surface. These lots will be accessed from a new road network that extends from the eastern side of Omokoroa Road.

Prior to subdivision earthworks, the site comprised two prominent hills in the northern and north-western portions of the site. A peninsula extended near the south-eastern boundary into Mangawhai Creek with east-west trending gully formations in the central and southern portions of the site. Slope gradients through the gully are gentle to moderately sloping (6 to 26 degrees).

Stage 2 is located in the western portion of the subdivision within gently sloping ground to the west of the central and southern gully features.

3. RELATED REPORTS

The following geotechnical reports have been completed for the Te Awanui Waters subdivision:

- Geotechnical Assessment report – 423 Omokoroa Road, Omokoroa, prepared by S & L Consultants, dated 9 August 2016 (ref: 211118.R1) to support a resource consent application for the Te Awanui Waters subdivision;
- Geotechnical Completion report (GCR) for Stage 1 – 423 Omokoroa Road, Omokoroa, prepared by S & L Consultants, dated 5 April 2018 (ref: 211118) to provide certification for a previous stage of the Te Awanui Waters subdivision.

The conclusions and recommendations from the previous reports that were applicable to the subject area were considered during the earthworks development and have been reviewed during the preparation of this document.

4. PRE-DEVELOPMENT INVESTIGATIONS

The landform over which Te Awanui Waters subdivision is situated was investigated under the direction of S&L during preparation of the above-referenced Geotechnical Assessment Report and comprised a combination of cone penetrometer tests (CPTs) and hand auger boreholes.

The location of the above investigation sites within the general Stage 2 area are shown on ***Drawing 02***. A copy of the field investigation logs, and CPT traces are provided in ***Appendix C***.

5. OVERVIEW OF GEOLOGICAL CONDITIONS

Published geological information for Omokoroa is presented in the 1:50,000 scale Geology Map of the Tauranga Area[1]. Those documents indicate that the site is underlain by Pliocene aged Waiteariki Ignimbrite (2.18 Ma) The Waiteariki Ignimbrite is typically overlain by several metres of fluvially reworked volcanic sediments comprising sands, silts and clays of the Pleistocene aged Matua Subgroup.

Within the elevated topography surrounding the Tauranga area, and as encountered during the pre-construction investigations, the Matua Subgroup is mantled by volcanic ash deposits comprising interbedded silts and sand, comprising from oldest to youngest the Hamilton ash, Rotoehu ash and the recent post-Rotoehu ash (Younger Ash).

6. DESCRIPTION OF EARTHWORKS

6.1. Plant

The main items of plant used by the contractor, HEB Construction Ltd and their bulk earthworks subcontractor McPherson Contractors, during bulk earthworks included:

- Excavators
- Tractors and skid scoops
- Pad-foot and sheep-foot compactors
- Bulldozers

6.2. Construction Programme

Earthworks operations for Stage 2 were undertaken between March 2017 and April 2019 following the stripping and stockpiling of topsoil to expose the underlying natural ashes.

Following the topsoil stripping operations, the site was shaped into a gently graded landform to design levels. This involved down-cutting the prominent hill in the central portion of Stage 2 and filling the adjacent swales to the north and west. The fill comprised cohesive ash soils. The fill was tested by WSP Opus to ensure the fill compaction met project specifications outlined in the S&L Geotechnical Assessment Report.

A temporary stormwater attenuation pond was constructed within Lot 55 during construction of Stage 2 and was backfilled in March and April 2019 as part of the final earthworks for the subdivision. The pond base, forebay and sides were undercut as part of the pond decommissioning to remove any soft silts.

6.3. Completed Landform

As depicted on the appended ***Drawing 03, Drawing 04 and Drawing 05***, Lots 36 to 61 have been formed from earthworks cuts and fills of up to 8.2m and 4.8m deep respectively to form near level to sloping residential lots to slope gradients of up to 1V:5H.

Earthworks to complete this stage of the subdivision extended well beyond the stage boundaries into the adjacent Stage 1 and future Stage 4 areas to design subgrade levels.

A low height (up to 1.5m) timber pole retaining wall has been constructed on the southern stage boundary to support a cut batter.

[1] Briggs, R.M. et al, 1996, Geology of the Tauranga Area, Institute of Geological and Nuclear Sciences Limited, Sheet U14, 1:50,000

7. GEOTECHNICAL QUALITY CONTROL

7.1. Site Observations

Site observations were periodically undertaken by CMW, S&L and WSP Opus during bulk earthworks to assess compliance with NZS 4431, Western Bay of Plenty District Council (WBoPDC) 2009 Development Code (DC), and the project specification.

As discussed in Section 1 above, S&L consultants were engaged as the geotechnical consultants for the subdivision until October 2018, therefore some initial stripping and pre-fill observations were undertaken by S&L and WSP Opus within the Stage 2 boundary prior to CMW's engagement.

Site visits were carried out to observe and confirm compliance relating to:

- Adequate topsoil stripping (CMW, S&L);
- Subgrade preparation prior to the placement of fill materials to ascertain that all organic subsoils had been removed (CMW, S&L);
- Placement of engineered fills during construction (WSP Opus);
- Drilling hand auger boreholes across the as-built landform to verify soil shear strength and consistency.

The results of our observations, and those of S&L, WSP Opus, and associated correspondence with the developer and earthworks contractor show that the works appear to have generally been carried out in accordance with the relevant codes and standards and our on-site recommendations.

7.2. Compaction Control

Regular fill compaction testing was carried out by WSP Opus with respect to NZS 4431:1989 and the WBoPDC 2009 DC. Based on a fill volume of 9,000m^3 and 13 fill compaction tests across Stage 2, as shown in ***Drawing 2,*** the minimum testing frequencies stipulated by NZS 4431:1989 and the WBoPDC have been satisfied.

The compaction control criteria adopted for cohesive engineered fills on this site were as follows:

Air voids percentage average value* less than	10 %
Air voids percentage maximum single value	12 %
Undrained shear strength average value* not less than	150 kPa
Undrained shear strength minimum single value	100 kPa

*The average value is determined over any ten consecutive tests.

Minimum Shear Strength was measured by hand-held shear vane calibrated using NZGS 2001 method, whilst maximum air voids was as defined in NZS 4402:1986.

7.3. Post Construction Investigations

At the completion of the subdivision earthworks a series of post construction hand auger boreholes in conjunction with in-situ shear vane tests were completed by CMW to provide representative near-surface subsoil information for residential building construction.

Test locations are presented on ***Drawing 05*** and borehole logs with detailed descriptions and depth of strata encountered during the post construction investigations are appended (refer ***Appendix E***).

7.4. Contractors Work

CMW's site presence during earthworks construction for this project included periodic observations of specific elements of work as described herein. As we were not on site at all times during construction, we

have relied on the Contractor's diligence and construction observations to ensure that the works have been carried out in accordance with:

a) The approved Contract drawings and design details;

b) The approved Contract specifications;

c) Authorised Variations to (a) and (b) during the execution of the works;

d) The conditions of Resource, Earthworks and Building Consents where applicable;

e) The relevant Geotechnical Investigation reports, recommendations and site instructions,

and that all as-built information and other details provided to the Client and CMW are accurate and correct in all respects.

8. EVALUATION OF COMPLETED LANDFORM

8.1. Earthfill Suitability

Results of the earthfill quality control testing are provided in ***Appendix D***, with fill test locations depicted on ***Drawing 04***.

Based on the appended fill quality control test results, the results of our post construction investigations, together with having some reliance on the diligence of the bulk earthworks contractor at times when engineering staff were not present on site, the fill areas across Stage 2 area are considered to have generally been constructed in accordance with NZS4431:1989, the WBoPDC 2009 DC and the compaction control criteria.

8.2. Liquefaction and Lateral Spread

Due to the generally cohesive nature of the ground conditions exposed, their geological age and presence of a suppressed groundwater table with several metres of non-saturated subsoils, the risk of damage due to the effects of liquefaction and lateral spreading during an Ultimate Limit State seismic event for an Importance Level 2 structure is considered to be low.

8.3. Slope Stability

The landform across Stage 2 comprises a series of terraced building platforms, with the nearest slope occurring in the north-western sides of lots 41-43 and lots 52-56 towards Omokoroa Road. It is gently to moderately sloping at slope gradients of less than 1(v) in 5(h). We consider the risk of slope instability for the lots within Stage 2 to be low.

8.4. Foundation Bearing Capacity

Post construction boreholes and shear vane testing were completed following earthworks and based on the engineered fill test results all lots in cut and fill across the Stage 2 area may assume a Geotechnical Ultimate Bearing Capacity of 300 kPa for the construction of shallow foundations in accordance with NZS 3604.

The upper silts and sandy silts are susceptible to shear strength fluctuations with seasonal moisture content variations and accordingly all building platforms must be subject to routine foundation inspection by the area building inspector at the time of building construction.

Where any isolated lenses of soft or loose soils are encountered, they must be over-excavated and replaced with suitably compacted granular filling or footings widened / deepened accordingly necessitating the involvement of a Chartered Professional Engineer.

8.5. Cut and Fill Restrictions

The lots are relatively flat to gently sloping and as such it is anticipated that only minor cut to fill earthworks will be required to create level building platforms. Normal topsoil stripping, conditioning and appropriate compaction where applicable for any filling must be in accordance with the requirements of NZS 4431 and the WBoPDC 2009 Development Code and subject to engineer inspections and certification at that time.

In completing the earthworks, the following shall be adopted unless specifically endorsed by CMW review:

- Unsupported cut and fill batters shall be graded no steeper than 1 vertical to 2.5 horizontal unless supported by engineer designed retaining walls.
- Temporary unsupported cut and fill batters graded at up to 2(V):1(H) to a maximum height of 2.0 metres are considered permissible for a short duration (weeks only) during building construction.

It should be noted that re-compaction of locally derived clay/silt materials to engineer standard can be problematic during winter months due to elevated soil moisture conditions. Where earthworks are scheduled during wet weather, allowance may be required for importing sand or pumice as a fill source.

8.6. Fill Induced Settlements

Due to the presence of stiff natural subsoils beneath the fills placed and the time passed since initial fill placement, we are of the opinion that fill induced settlements should be insignificant with respect to future residential development. On this basis, the building platforms should comply with minimum settlement criteria of 25mm over 6 metres for the serviceability limit state scenario stated in Appendix B of Section B1/VM4 of the NZ Building Code.

It is noted that NZS3604 only allows for a maximum backfill of 600mm over the building platform due to the net increase in stress resulting in ground settlement, unless preceded by specific investigation and assessment by a Chartered Professional Engineer.

8.7. Common Boundaries Restriction

All future engineer designed boundary retaining walls must be specifically designed to consider potential future developments on adjacent lot boundaries.

Upslope property boundary retaining wall foundations must extend no less than 0.5m below the downslope ground level and must be specifically designed by a Chartered Professional Engineer. Temporary excavations on or near the downslope property boundary must be restricted to 0.5m unless structural support is provided that is designed by a Chartered Professional Structural Engineer.

8.8. Retaining Walls

An existing timber cantilever retaining wall has been completed as part of Stage 2 supporting the southern boundary adjacent to Lots 59 to 61. Design and construction inspections related to construction of this wall was undertaken by S&L Consultants.

The position of the existing retaining wall is depicted on the appended as-built contours plans prepared by S&L (Appendix B). Any proposed excavation within a horizontal distance equal to the retained height of the existing wall on Lots 59 to 61 will require specific engineering design by a Category 1 Geotechnical Engineer familiar with the contents of this report.

Given the slope gradients present across the completed lots, retaining wall construction may be required as part of future building consents. The following design parameters may be adopted for permanent retaining walls:

Table 1: Retaining Wall Design Parameters

Soil Unit	Y (kN/m^3)	Ø' (deg)	K_0	E' (MPa)	No wall friction		Wall friction = 2/3Ø	
					K_a	K_p	K_a	K_p
Engineered Fill (Hard clayey silt)	18.0	30	0.50	20	0.31	3.27	0.27	6.24
Younger Ashes (Firm to very stiff clayey silt and sandy silt)	16.0	28	0.53	16	0.34	3.00	0.29	5.25
Matua Subgroup (stiff to very stiff silty and clayey silts)	16.0	28	0.53	18	0.34	3.00	0.29	5.25

Notes:

1. Y – soil unit weight; Ø' - angle of internal soil friction; K_0 - coefficient of earth pressure at rest, K_a - coefficient of active earth pressure, K_p - coefficient of passive earth pressure; E' – long term Young's modulus.
2. Values of K_0 are based on initial conditions.
3. The retaining wall designer must adopt the above set of K_a and K_p parameters relevant to the actual construction method adopted

Table 1: Retaining Wall Design Parameters								
Soil Unit	**Ɣ (kN/m³)**	**Ø' (deg)**	**K_0**	**E' (MPa)**	**No wall friction**		**Wall friction = 2/3Ø**	
					K_a	**K_p**	**K_a**	**K_p**
4. The above parameters are based on the condition of a horizontal ground surface behind the retaining structure. Applicable surcharge loads behind the wall must also be considered in the design.								

It should be noted that some ground movement will occur behind any temporary or permanent walls. By definition, movement of the wall must occur to fully mobilise the active and passive earth pressure coefficients provided in Table 1 above. The extent of this movement is dependant on the height of retaining, type of wall constructed and construction methodology. This must be considered during the design and construction of the retaining walls to ensure that adjacent properties and any existing services are not adversely affected.

8.9. Respread Topsoil

Topsoil depths were checked during advancement of the post construction hand auger boreholes, with indicative topsoil depths ranging from 50 to 300mm, though it is noted that topsoil depths may vary away from test locations.

8.10. Stormwater Controls

In terms of future stormwater management, it is important that due care is paid to the design and construction of appropriate stormwater disposal systems. These systems should collect all runoff from roofs and paved areas, together with discharge from any future retaining wall drains and other subsoil drains, which should connect directly into the public stormwater drainage network.

Uncontrolled stormwater discharges onto the ground surface or into soakage pits can cause erosion, scour and/or instability and are not permitted under any circumstances.

It should be noted that any future site owner will become responsible for Erosion and Sediment Control Measures that comply with Regional Council requirements as soon as development works begin on the site. Measures deemed necessary will need to be maintained until the development lot area is re-stabilised and/or stormwater is disposed to reticulation.

8.11. Service Trenches

The backfilling and compaction of service trenches on this subdivision were not inspected as part of CMW observations. As is normal on all subdivisions, building developments involving foundations within a 45-degree zone of influence from pipe inverts will require specific design by a Chartered Professional Engineer with a view to piling foundation loads below that zone.

8.12. Road Subgrade

All road subgrade preparation, inspections and certification have been completed under the direction of S&L.

9. SUITABILITY STATEMENT

A copy of our suitability statement, in the form of the Western Bay of Plenty District Council Cert 10C – Suitability of Land for Building, is attached as ***Appendix A.***

10. LIMITATION

This report has been prepared for use by our client Neil Construction Limited, their consultants and Western Bay of Plenty District Council. Liability for its use is limited to the scope of work for which it was prepared as it may not contain sufficient information for other parties or for other purposes.

Although regular site visits have been undertaken for observation, for providing guidance and instruction, the geotechnical services scope did not include full time site presence. To this end, our appended suitability statement relies on the Contractors' work practices and assumes that when we have not been present to observe the work, it has been completed to high standards and in accordance with the drawings, instructions and consent conditions provided to them.

There may be special conditions pertaining to this site which have not been disclosed by the investigations and which have not been taken into account in the report. If variations in the subsoils occur from those described or assumed to exist then the matter should be referred back to CMW immediately.

For and on behalf of CMW Geosciences

APPENDIX A:

STATEMENT OF PROFESSIONAL OPINION AS TO THE SUITABILITY OF LAND FOR BUILDING DEVELOPMENT

To: Western Bay of Plenty District Council

STATEMENT OF PROFESSIONAL OPINION AS TO THE GEOTECHNICAL SUITABILITY OF LAND FOR BUILDING

Development: Stage 2 Te Awanui Waters Subdivision
Owner: Neil Construction Limited
Location: 423 Omokoroa Road, Omokoroa

I, David John Morton of CMW Geosciences (NZ) Limited Partnership

Hereby confirm that:

1. I am a professional person, appropriately qualified with experience in geotechnical engineering to ascertain the suitability of the land for building development and was retained as the Soils Engineer to the above development.

2. An appropriate level of site investigation and construction supervision has been carried out under direction of the previous geotechnical engineers S&L Consultants Limited which we have reviewed prior to our engagement at the site and is described in my Geotechnical Completion Report dated 6 August 2019 (ref. TGA2018-0199AB).

3. In my professional opinion, not to be construed as a guarantee, I consider that;

   a) Every part of the areas shown in my report dated 6 August 2019 of each new residential allotment is suitable for the erection thereon of the building types appropriate to the zoning of the land, provided that:

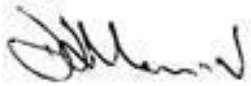
      I. The specific recommendations provided in my 6 August 2019 report relating to foundation bearing capacity, are followed;
      II. The specific recommendations provided in my 6 August 2019 report relating to fill induced settlements, are followed.
      III. The specific recommendations provided in my 6 August 2019 report relating to building setbacks from the existing retaining wall on the subdivision boundary affecting lots 59 to 61 are followed.
      IV. The specific recommendations provided in my 6 August 2019 report relating to common boundary restrictions between residential lots are followed.

   b) The completed works give due regard to all land slope and foundation stability considerations.

   c) The earth fills identified in my 6 August 2019 report and as shown on the As-Built Cut Fill Contour Plan (Drawing 04) appended to my 6 August 2019 report has been placed in accordance with the Subdivision and Development Code of Practice of the Western Bay of Plenty District Council.

   d) The engineer filled ground within lots 36 to 61 are suitable for the erection of residential building not requiring specific design in terms of NZS 3604 and related documents subject to routine inspections at the time of building construction. A geotechnical ultimate bearing capacity of 300 kPa may be assumed for the subsoils beneath these lots.

4. This professional opinion is furnished to the Council and the owner for their purpose alone, on the express condition that it will not be relied upon by any other person and does not remove the necessity for the normal inspection of foundation conditions at the time of erection for any dwelling.



Signed …….. Date …6 August 2019……

Drury 2247
NZ

Project: 423 Omokoroa Rd

IANZ ACCREDITED LABORATORY

Approved Signatory: Rob Ermens
(Lab Manager)
IANZ Accreditation No:749
Date of Issue: 6/03/2017

Sample Details

Sample ID:	BOP17S-00304
Client Sample ID:	
Material:	Ash
Sample Source:	Insitu Material
Site/Sampled From:	Top of Hill
Date Sampled:	15/02/2017
Specification:	No Specification
Sampled By:	Barrack Carle
Sampling Method:	Not Applicable - Not Accredited
Date Tested:	02/03/2017
Technician:	Barrack Carle
Sampling Endorsed?:	No

Test Results

Description	Method	Result	Limits
Solid Particle Density (t/m³)	NZS 4402:1986 Test 2.7.2	2.55	
History		Air Dried	
Test Perfomed on Fraction		Whole

EARTHWORKS COMPACTION CONTROL TEST RESULTS

OPUS

Project :	**Omokoroa Development**
Location :	**Omokoroa**
Client :	**McPherson Contractors Ltd**
Contractor :	**McPherson Contractors Ltd**
Tested by :	**Greg Cleaver (Opus Laboratory)**
Date tested :	**2 March 2017**
Nuclear densometer no :	**3440-13867**
Solid density (supplied) :	**2.48 t/m³**
Max dry density (supplied) :	**0.97 t/m³**
Optimum water content (supplied) :	**51.0 %**
Shear vane no :	**DR2410**
Shear vane correction :	**1.421**
Material description :	**Bulk Fill (Orange brown silt)**

Project No :	**255528.00/0TL**
Lab Ref No :	**TG701**
Client Ref No :	**--**

Nuclear Densometer Test Results									
Test Number	1*								
Lot No.	6								
Approximate fill depth	1.0m								
GPS Coordinates (BOP circuit 2000)	N811293.8 E361188.5								
Test Probe Depth (mm)	300								
Wet Density (t/m³)	1.54								
Dry Density (t/m³)	0.93								
Water Content (%)	66.0								
Air Voids (%)	1.6								
% of MDD	95								

Oven Corrected Test Results									
Dry Density (t/m³)	0.92								
Water Content (%)	66.7								
Air Voids (%)	1.4								
% of MDD	**95**								

Shear Vane Test Results									
Shear Vane Reading	53								
Shear Strength (kPa) - Ave. of 3	**75**								

Test Methods		Notes
In-situ Density & Water Content	NZS 4407 : 2015 : Test 4.2	The test position was selected by Steve McPherson of
Water Content	NZS 4402 : 1986 : Test 2.1	McPherson Contractors and is approximate only.
Shear Stress	NZGS 8/2001	UTP = Unable to penetrate.

The maximum dry density and optimum water content values were obtained from Fulton Hogan BOP Laboratory report MDD:BOP17S-00302, dated 28/2/17.

The solid value was obtained from Fulton Hogan BOP Laboratory report MAT:BOP17S-00302, dated 28/2/17.

Date reported : 10 March 2017

Preliminary report ONLY - subject to checking.

Approved

Designation : *Senior Civil Engineering Technician*

Shear Stress : NZGS 8/2001	of McPherson Contractors and test position 21 was selected by
Water Content : NZS 4402 : 1986 : Test 2.1	Sam Waugh of HEB Construction.
	All test positions are approximate only.
	UTP = unable to pentrate.

IANZ accreditation of this report excludes the nuclear densomter and oven corrected results as the wet density values fell outside the nuclear densometer calibration range of 1700 - 2650kg/m3.

#Excluded from IANZ accreditation.

Date reported : 19 December 2017

EARTHWORKS COMPACTION CONTROL TEST RESULTS

WSP OPUS

Project :	**423 Omokoroa Development**
Location :	**Omokoroa**
Client :	**McPherson Contractors Ltd**
Contractor :	**McPherson Contractors Ltd**
Tested by :	**Greg Cleaver (Opus Laboratory)**
Date tested :	**20 March 2018**
Nuclear densometer no :	**3440-13867**
Solid density (assumed) :	**2.65 t/m³**
Maximium dry density :	**Unknown**
Optimum water content :	**Unknown**
Shear vane no :	**DR2410**
Shear vane correction :	**1.406**
Material description :	**Bulk Fill (Orange-brown silt)**

Project No :	**255528.00/0TL**
Lab Ref No :	**TG2004**
Client Ref No :	--

Western Bay of Plenty District Council

Consent Notice Pursuant to Section 221 Resource Management Act 1991

File Ref: S/B/11976

IN THE MATTER OF: Deposited Plan 537960

A N D

IN THE MATTER OF: Subdivision Consent pursuant to Sections 108, 220 and 221 of the Resource Management Act 1991.

I, CHRIS WATT, Authorised Officer of the Western Bay of Plenty District Council, hereby certify that by way of resolution passed under delegated authority on 13 December 2016, the following condition was imposed on the subdivision consent formerly know as (Lot 2 DP 312635 & Lot 1 DP 488385) Lot 301 Deposited Plan 524760.

THAT pursuant to section 221 of the Resource Management Act 1991 consent notices are registered against the titles of Lot(s) 36-61 such that:

THAT all development must be in accordance with the Geotechnical report by CMW Geosciences, dated 6 august 2019, reference TGA2018-0199AB – Rev.0

Dated at Tauranga this 17th day of September 2019

Authorised Officer
